## **Saft Block Battery Product Ranges**

Standard Ni-Cd **Block Battery** ranges use the well established pocket plate technology and consists of three performance ranges: high rate, medium rate and general purpose.

The **SBLE** block battery range is designed for applications typically power backup and bulk energy storage all requiring a reliable source of energy over relatively long discharge periods,

The **SBM** block battery range is designed to sustain electrical loads for between 30 minutes to 3 hours or for "mixed" loads involving a mixture of high and low discharge rates, typically used in power backup applications.

The **SBH** block battery range is designed for applications demanding a relatively high current over short periods, usually less than 30 min duration. They are typically used in starting and power backup applications.
