IBLUK Nickel-Cadmium Battery Technical Paper – Engine Starting

Industrial Batteries (UK) Limited – IBLUK – is developing a range of technical papers covering nickel-cadmium industrial batteries and battery applications. These will be released over a period of time and will be available on request from the company.

The first of these to be issued concerns the choice of battery for industrial engine starting applications.

The main topics covered in this paper are:

- An overview of the application.
- The factors affecting battery performance.
- How to assess the battery size taking into account the environmental and application factors.
- An overview of the method used for sizing the battery and software sizing methods.
- An engine starting questionnaire as a guide to the information required to produce a correct battery specification.

The paper can be obtained from Industrial Batteries (UK) Limited via a request form on the IBLUK web site.

Industrial Batteries (UK) Limited - IBLUK – are the main distributor of Alcad Industrial Nickel-Cadmium Batteries in the United Kingdom and can also supply from the Saft industrial range. In addition to assisting the customer in their choice of battery and battery stand, it can also offer an extensive selection of approved accessories, a technical consultancy service, user training and a battery replacement and recycling service

To obtain a copy of the paper, please visit our web site www.ibluk.co.uk and complete the 'Request White Paper' on-line order form.
